Sequence 12725, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
CURRENT APPLICATION NUMBER: 1326-034
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 12725

Sequence 161396, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REPERENCE: CLO01307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-10-14

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and it belongs to a clone representative of this cluster. end cariched, double-strand cDNA was digested with Not I and cloned
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoP V sites of the pcMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and it belongs to a clone representative of this cluster. UI-B-EJO is a subtracted cDNA library constructed

UI-B-EJO is a subtracted cDNA library constructed

scoroling to Bonaldo, Lennon and Soares, Genome Research, escoroling to Bonaldo, Lennon and Soares, Genome Research, stranded cDNA was ligated to an EcoR I adaptor, digested with an oligo-dT primer containing a Not I site. Double with Not I, and clonded directionally into PT7T3-Pac vector. The oligonucleotide used to prime the synthesis of vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library are: fetal eyes, sequence tags for this library are: fetal syes

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Di Francesco V, Beasley EM; Human; phospholipase; enzyme; chromosome 2. Human phospholipase protein SEQ ID NO:2. RESULT 1

New human phospholipase proteins, useful for the development of human therapeutics and diagnostic compositions, drug screening assays, tissue typing and pharmacogenomic analysis.

The present sequence represents a human phospholipase protein (1) located on chromosome 2. (1) can be used for identifying agents that modulate its function or activity where the agent is useful for treating a disease or condition mediated by a the human phospholipase protein. (1) peptides can be used in substantial and specific assays related to functional information of the peptide sequences, to raise antibodies or to elicit immune response, as reagents in assays that determine the levels of protein in biological fluids, and as markers for tissues where the corresponding protein is expressed. Nucleotide sequences encoding (1) can be used as probes, primers and chemical intermediates in biological assays, for constructing recombinant vectors, and expressing antigenic portions of the protein. (1) and nucleic acid molecules encoding it can be used in the identification of therapeutic proteins and may serve as

The invention relates to a novel human lipase (NHL, ABB09555, ABB09556)

CC and to nucleic acids encoding it (ABQ77623, ABQ77624). The NHL has

CC structural similarity with animal lipases, particularly phospholipase B.

cc structural similarity with animal lipases, particularly phospholipase B.

CC in conjunction with human thyroid and brain cDNAs. The NHL gene is

In conjunction with human thyroid and brain cDNAs. The NHL gene is

cc in conjunction with human thyroid and brain cDNAs. The NHL gene is

located on chromosome 2, and contains a C/T polymorphism at position at

cc the open reading frame (ORF), resulting in an Ala/Val substitution at

cc the open reading frame (ORF), resulting in an Ala/Val substitution at

cc treating disorders such as inflammatory or proliferative disease.

cc infections disorders and inflammatory or proliferative disease.

cc infections disorders, and cancer. They can also be used

infection disorders, and disponders, and cancer. They can also

cc medical disorders, and ingnostic reagents, in clinical trial

cc medical disorders, and nutriceutical applications. NHL

conclotides can additionally be used in the detection of disease.

cucleotides can additionally be used in the detection of disease.
